Bio

Backend engineer focused on distributed systems, real-time analytics, and ML infrastructure.
Interested in Linux/NixOS, self-hosting, automation, and reliable production systems.

PRIOR WORK EXPERIENCE

Backend Software Engineer at Ozon Tech

11.2024 – Present

Developing services for a real-time analytics BI platform, focusing on event delivery, resource efficiency, and reliability. Reviewed designs and code for backend systems, helped document operational practices, and contributed to cross-team delivery of analytics and stability features.

Moscow, Russia

Developer at VK, AdTech

06.2023 – 11.2024

Worked on high-volume advertising statistics infrastructure, including attribution logic, S2S integrations, and charging. Implemented startup bootstrapping for stateful backend services and improvements for event processing orchestration.

Moscow, Russia

Intern at Sber Robotics Lab

11.2022 – 02.2023

*Created Web-UI for ESP32 configuration and tracing in Python.
Conducted research on semantic segmentation of RGB-D images.*

Moscow, Russia

EDUCATION

Higher School of Economics, 01.04.02

09.2023 – 06.2026

*Moscow Institute of Math and Electronics,
Master's degree: Applied artificial intelligence models.*

Moscow, Russia

Bauman Moscow State Technical University, 09.03.01

09.2019 – 06.2023

*Department of robotics and complex automation,
Bachelor's degree: Computer aided design.*

Moscow, Russia

CERTIFICATIONS

VK Education

09.2021 – 12.2022

Graduated from primary educational program, Machine Learning track.

Moscow, Russia

PERSONAL PROJECTS

Soy Phenotyping Automation | [torch](#), [transformers](#), [ultralytics](#), [CVAT](#), [LabelStudio](#)

- RnD for a soybean field video-processing pipeline using segmentation, depth estimation, detection, and counting models to score plant coverage and plot quality.
- Experiment design, data collection and processing, manual/model-assisted annotation, model selection and testing.
- **Keywords:** RnD, agriculture automation, segmentation, zero-shot, fine-tuning

Production-ready ML service demo | [python](#), [sklearn](#), [hydra](#), [Flask](#), [Docker](#), [Kubernetes](#)

- Model training and inference pipelines with hydra, deployed to k8s (VKCS) with helm as a Flask web app.
- **Keywords:** batch/online inference, helm, terraform, MLOps, GitHub Actions

TECH STACK

PL: Golang, Python, C/C++, L^AT_EX

Technologies: Kafka, Clickhouse, HDFS, S3, Kubernetes, Terraform, Prometheus, Spark, NixOS
